Supervisor

DEDICATION

This work is dedicated to my parents.

Acknowledgments

To everyone that helped and advised me along the course of this endeavor, I would like to sincerely thank you. I want to start by sincerely thanking MD. AYUB ALI, Assistant Professor, Barishal University, for their great advice, helpful criticism, and unwavering support, all of which were essential in helping to shape this project. Additionally, I am appreciative to the Barishal University students who voluntarily took part in this study and offered insightful commentary on the Objective-Based Education (OBE) curriculum. Their opinions and thoughts were crucial to the accomplishment of this study.

In addition, I would like to thank my friends, professors, and peers for their support and advice throughout my study.

Abstract

This study explores the opinions of Barishal University first-year students in the 2021–22 academic year about the recently introduced Objective-Based Education (OBE) curriculum. With almost 200 students participating, this is the first group to experience the OBE system, therefore there is a great deal of misunderstanding and ambiguity regarding the system's design and how it affects learning objectives. The purpose of the study is to find out what students think about the advantages, difficulties, and efficacy of the OBE method, which has not yet been completely adopted by all departments. The results show how students feel about the OBE curriculum's main features, such as how well it matches learning objectives, how applicable it is to potential career paths, and how difficult it is to put into practice. Although many students recognized the OBE system's potential advantages, there were also clear reservations about how it was implemented and if it had enough resources. These observations offer legislators and curriculum designers useful information for improving.

Chapter One

Introduction

1.1: Background

In Bangladesh, both the number of higher education institutions and the demand for higher education have grown dramatically in recent years. In order to meet the changing needs of the domestic and international labor markets, more access to higher education has become essential. Raising the standard of higher education is seen to be crucial to this procedure. Enhancing the curriculum, faculty, academic facilities, physical resources, and research opportunities are all necessary to raise the standard of higher education. Higher education curricula ought to be outcome-based, with the aim of closing the gap between the supply of qualified graduates graduating from universities and the demand for them in the labor market. Universities should embrace and implement the objective-based education approach in order to guarantee the desired outcome. Every component of an educational system is predicated on the accomplishment of outcomes, according to the educational theory known as objective-based education (OBE). Every student should have accomplished the objective or intended result by the end of the educational process. At several levels, OBE techniques have been used into educational institutions worldwide. By establishing explicit expectations for what must be completed by the end of the course, the OBE curriculum guarantees clarity. Teachers are aware of what they must teach during the course, and students are able to comprehend what is required of them. Since OBE is designed to be a student-centered learning style, it offers flexibility in instruction. Through a variety of student-engaged teaching and learning strategies and ongoing evaluation, it engages students in the classroom. Based on the results at other universities, institutions can compare themselves to discover what results they have in common and identify areas where they might need to improve. Based on the intended objective or aim that students should have attained by the time they graduate; these OBE Curriculum templates will serve as a guide for institutions as they create their own curricula. Therefore, these templates should be viewed as realistic standard guidelines for the educational process rather than as being the same for all colleges. In March 2018, a committee of seven experts from various domains prepared the OBE templates at the initiative of UGC. An acceptable draft of OBE curriculum templates that may be customized to satisfy university requirements was finalized by the committee following multiple discussions with UGC authority and among themselves. At the Full Commission's 156th meeting on September 24, 2019, the draft was presented, and the Commission agreed to solicit input from public universities prior to finalization. A team of five people worked on the OBE Curriculum Templates draft after receiving the feedback and recommendations. The UGC Strategic Planning and Quality Assurance (SPOA) Division has been in charge of organizing the entire process, and on February 5, 2020, the 157th meeting of the Full Commission of UGC accepted the templates. Founded in 2011, Barishal University, situated in southern Bangladesh, is among the nation's newest public universities. The institution has sought to offer top-notch instruction to students nationwide, especially those in the Barishal area, since its founding. The institution provides undergraduate and graduate degrees in a number of subjects, including as engineering, business studies, social sciences, and the natural sciences. In several disciplines, it presents the OBE curriculum for the 2022–2023 school year.

The introduction of the OBE curriculum at Barishal University reflects the institution's commitment to enhancing the quality of education and aligning its programs with international

standards. However, as with any major educational reform, the implementation of OBE has been met with both enthusiasm and scepticism. While some students and faculty members appreciate the focus on clear objectives and measurable outcomes, others have raised concerns about the feasibility of the OBE model in the context of Bangladesh's higher education system, where resource constraints and traditional teaching methods remain prevalent.

1.2 CONTEXT

Curriculum for education (OBE), which emphasizes establishing precise, quantifiable learning objectives for pupils. OBE places more emphasis on achieving particular skills and competences by the conclusion of the educational process than traditional education systems, which place more emphasis on content delivery. The goal of this move toward outcome-oriented learning is to help students get a deeper comprehension of their subject matter and better prepare them for obstacles they may face in the real world.

OBE entails unambiguously concentrating on and structuring an educational system around the skills that every student must possess in order to graduate from their educational experiences successfully. Beginning with a clear understanding of the knowledge, skills, and abilities that students should possess, the curriculum, instruction, and assessment should be planned to ensure that this learning eventually takes place.

Figure 1: OBE Process

The vision of the university is to emerge as one of the leading and premier centres of higher studies in arts, social science, science, engineering and technology. OBE aim at providing an education of high excellence to our young learners in a congenial and friendly atmosphere, and attracting brilliant students, distinguished scholars, researchers, scientists from home and abroad.

1.3 PURPOSES

The OBE framework typically involves several key elements, including:

Clearly Defined Objectives: Each course or program begins with a clear set of objectives or learning outcomes that outline what students should know or be able to do upon completion. These outcomes are usually measurable and observable.

Student-Centred Learning: The OBE curriculum focuses on the needs of the students, tailoring instructional methods to help them achieve the defined objectives. This often involves active learning strategies, project-based learning, and other student-engagement techniques.

Assessment and Feedback: OBE places a strong emphasis on assessment as a means of measuring whether students have achieved the desired outcomes. Formative assessments, summative assessments, and feedback mechanisms are integral to the process.

Continuous Improvement: OBE encourages educators to continuously review and improve the curriculum based on student performance and feedback, ensuring that the program remains relevant and effective in achieving its goals.

This study focuses on obtaining the overall views of students at Barishal University regarding the Objective-Based Education (OBE) curriculum and their opinions on its effectiveness, relevance, and challenges. In particular, it seeks to explore students' understanding of the OBE framework, their experiences with the curriculum, and their perspectives on how it aligns with their educational and professional aspirations.

The purpose of this study is to gain a comprehensive understanding of how students at Barishal University perceive the Objective-Based Education (OBE) curriculum. Specifically, the study aims to:

- Explore students' understanding of the OBE framework and how it differs from traditional education systems.
- Assess students' opinions on the effectiveness of the OBE curriculum in helping them achieve their academic and professional goals.
- Identify the challenges students face in adapting to the OBE approach, including issues related to assessment, learning strategies, and resource availability.
- Gather suggestions from students on how the OBE curriculum can be improved to better meet their needs and expectations.

Chapter Two

Literature Review

In academic literature, the idea of Objective-Based Education (OBE) has been thoroughly examined. According to Spady (1988), OBE is an educational strategy that emphasizes goal and outcome setting during curriculum building and is typified by the intentional construction and documenting of instructional materials. According to this viewpoint, the curriculum is designed to produce the results that teachers hope their students will achieve when they graduate. OBE is further defined by Giese-Hood (1999) as a teaching approach that prioritizes student learning's process as well as its content. Furthermore, OBE is defined by Midraj (2018) and Tam (2014) as an educational framework in which teachers and students are knowledgeable about the learning objectives and criteria that students should meet and be able to practically exhibit by the end of their learning journey. This viewpoint emphasizes how crucial it is to match instructional methods with established learning objectives. In order to guarantee successful educational outcomes, Gurukkal (2020) emphasizes the importance of creating suitable learning objectives that are in line with the curriculum content. Additionally, Rao (2020) explores the identification of quantifiable and achievable outcomes that correspond with Bloom's taxonomy's cognitive, emotional, and psychomotor components.

Malan (2000) offers a teaching and learning model that incorporates components of earlier methodologies, including active learning, competency-based learning, and mastery learning. This approach promotes an educational system that is student-centric, gives individual learning needs first priority, and encourages stakeholder engagement in curriculum design. The fundamental principle of OBE is highlighted by Davis (2003), who stresses the importance of establishing desired objectives prior to creating the educational process. Furthermore, according to Mitra and Gupta (2020), the main objective of OBE is to give students the information and abilities they need to succeed in the global labor market. They contend that by helping students develop critical competences, Optimal Business Education (OBE) can successfully meet the changing needs of the market. Furthermore, Yusof et al. (2017) support the OBE curriculum as the best strategy for tackling today's educational issues. They suggest moving away from conventional competition. OBE is essentially a comprehensive educational framework that promotes student success in a changing global environment by giving priority to specific learning outcomes. With origins in curriculum design and educational psychology, the development and theoretical underpinnings of OBE date back to the middle of the 20th century. OBE sprang to prominence thanks to the writings of educators like Benjamin Bloom and Ralph Tyler, who highlighted the significance of establishing precise learning goals and matching teaching methods to them (Bloom, 1956) (Tyler R. W., 1949). Educational theorists like Ralph W. Tyler and Robert Mager, who highlighted the importance of explicit learning objectives and evaluation criteria (Mager, 1962; Tyler, R. W., 1978), contributed to the further development of this theoretical framework. Benjamin Bloom, an educational psychologist, has had a big impact on OBE. In particular, his taxonomy of educational objectives (Bloom, 1956) divided learning objectives into three categories: cognitive, emotional, and psychomotor.

The development and application of OBE in a variety of educational contexts, including higher education, have been made possible by these theoretical foundations. For OBE to be applied and evaluated effectively in many circumstances, it is imperative to comprehend its theoretical underpinnings and evolution. OBE has become more widely accepted and used in a variety of worldwide settings, improving learning results and promoting educational reform. OBE techniques and principles have been incorporated into the educational systems of nations including South Africa, Australia, and the United States. Through programs like the "Goals 2000: Educate America Act," which placed a strong emphasis on precise learning outcomes and criteria, OBE was included into K–12 education in the United States (Education, 1994). OBE was implemented in Australian higher education institutions to enhance the employability and qualities of graduates (Barrie, 2004). In order to address concerns of equity and educational access, South Africa also adopted OBE (Badat, 2003). These global OBE implementations demonstrate its versatility and efficacy in a range of educational contexts, making them useful case studies for nations like Bangladesh seeking to improve their teaching methods. However, during the past few decades, OBE has seen substantial adoption and expansion in Bangladesh's educational system. The nation's realization that higher education must adapt to the changing needs of society and the labor market has propelled this revolutionary journey. In order to improve the caliber and applicability of education in Bangladesh, the National Education Policy of 2010 placed a strong emphasis on implementing OBE principles (Ministry of Education, 2010). OBE practices and faculty development in higher education institutions have since been greatly aided by programs such as the Higher Education Quality Enhancement Project (HEQEP) (UGC, 2021). In accordance with global educational trends, OBE has consequently grown to be a crucial component of Bangladesh's tertiary education system, demonstrating the nation's dedication to turning forth graduates who possess both subject knowledge and practical competencies. 117 The use of OBE in Bangladesh is directed by fundamental ideas and industry best practices that are meant to improve the caliber and applicability of postsecondary education. The precise definition of learning outcomes, which form the basis of curriculum development and assessment techniques, is essential to these concepts (Uddin, 2017). A learner-centered approach to curriculum design in OBE guarantees that educational programs are in line with specified aims and promote practical skills, critical thinking, and problem-solving (Begum & Ahmed, 2014). In order to provide a thorough assessment of students' attainment of outcomes, assessment processes have expanded to incorporate a wide variety of techniques, including project-based exams, portfolios, and real assignments (Begum, 2014). Programs for faculty development have been crucial in giving teachers the pedagogical know-how they need to successfully apply OBE (Uddin, 2017).

To guarantee that the learning results correspond with the demands of the real world, stakeholder engagement through collaborations with businesses and industries has also been highlighted (Uddin, 2017). Our goal in this study is to evaluate how well Bangladesh's tertiary education system implements Objective Based Education (OBE) principles and practices, determining the degree to which these factors support OBE's successful implementation. The inception of OBE in Bangladesh dates back to the early 2000s, when the country realized that its tertiary education system needed a paradigm change. The National Education Policy of 2010 is consistent with this historical trend (Ministry of Education, 2010). Higher education institutions in Bangladesh were given the catalyst by this policy framework to start a radical

process of embracing OBE as a guiding principle. A notable change in educational procedures is seen in Bangladesh's present OBE adoption status. OBE concepts are being actively incorporated into the programs and curricula of numerous higher education institutions that have adopted them. The inception of OBE in Bangladesh dates back to the early 2000s, when the country realized that its tertiary education system needed a paradigm change. The National Education Policy of 2010 is consistent with this historical trend (Ministry of Education, 2010). Higher education institutions in Bangladesh were given the catalyst by this policy framework to start a radical process of embracing OBE as a guiding principle. A notable change in educational procedures is seen in Bangladesh's present OBE adoption status. OBE concepts are being actively incorporated into the programs and curricula of numerous higher education institutions that have adopted them.

OBE practices and faculty development in higher education institutions have been greatly aided by the government-initiated Higher Education Quality Enhancement Project (HEQEP) (UGC, 2021). This coordinated effort demonstrates how deeply OBE has ingrained itself into Bangladesh's tertiary education system. Even though OBE has advanced significantly in Bangladesh, there are still issues. Since many educators and institutions are used to traditional teaching approaches, one of the main obstacles is overcoming opposition to change (Uddin, 2017). Effective OBE implementation is also significantly hampered by resource limitations, such as financing and faculty development (Farhana, 2018). Additionally, maintaining constant quality and openness in OBE procedures is still difficult (Farhana, 2018). But there are also a lot of chances that come with these difficulties. OBE enables a more adaptable and learner-centered approach to education, encouraging students to enhance their practical, critical thinking, and problem-solving abilities (Ahmed, 2019). Opportunities to match learning objectives with practical demands and improve graduates' employability arise through collaboration with external stakeholders, such as businesses and industries (Ahmed, 2019). Bangladesh has the ability to further utilize OBE to satisfy the changing needs of its tertiary education landscape through continuous monitoring, feedback systems, and a dedication to improving educational quality. Our research focuses on determining the current gaps in the application of Outcome Based Education (OBE) principles and raising the standard of education in Bangladesh's higher education system. By carefully examining these real-world OBE implementation gaps, we hope to build a strong basis for maximizing OBE's potential and effectively meeting the changing needs of the nation's postsecondary education system.

Chapter Three

Methodology

3.1 Research Design

This study employs a **quantitative cross-sectional research design** to analyze students' views on the Objective-Based Education (OBE) curriculum at Barishal University. Data was collected at a single point in time to examine various factors influencing students' attitudes, satisfaction, and perceived effectiveness of the OBE curriculum by google form.

3.2 Participants

Participants were recruited from the student population at Barishal University, covering multiple faculties and academic levels. A total of 100 students participated in the study, representing diverse opinion on OBE curriculum system.

3.3 Data Collection

Data were gathered using a **structured questionnaire** distributed to participants. The questionnaire comprised several sections:

- **Demographic Information:** Academic status, CGPA, sex, and year of study.
- **Understanding of OBE:** Questions measuring students' awareness and understanding of the OBE curriculum.
- **Perceived Benefits of OBE:** Items assessing students' perceptions of how well the OBE curriculum aligns with their career goals, skills development, and academic success.
- **Satisfaction with OBE:** Questions focused on satisfaction with teaching methods, assessment practices, and course relevance within the OBE framework.
- **Challenges and Concerns:** Items exploring difficulties students encounter with the OBE approach.
- **Overall Opinion on OBE:** Open-ended questions and rating scales for students to express their views and recommendations on the OBE curriculum.

4. Descriptive Statistics

Descriptive statistics were computed to summarize the demographic characteristics and student responses concerning the OBE curriculum. Measures such as mean, standard deviation, frequencies, and percentages were used to provide a comprehensive overview of the data and insights into students' overall satisfaction and perceptions.

5. Association Tables

Association tables were constructed to explore relationships between categorical variables, such as academic status and understanding of OBE, satisfaction levels, and perceived benefits. Cross-tabulations displayed frequency distributions of key variables, providing an initial view of potential associations between students' characteristics and their views on OBE.

6. Chi-Square Test

The **Chi-square test** was applied to examine the independence of categorical variables, assessing whether significant associations existed between demographic factors (e.g., gender, academic status) and students' views on OBE curriculum aspects (e.g., perceived benefits, satisfaction). A significance level of $p < 0.05$ was adopted for this analysis.

8. Bootstrap for estimating parameter

9. Variance Inflation factor for checking Multicollinearity

11. Logistic Regression

12. Odds ratio

13. ROC curve

12. Statistical Software

All statistical analyses were performed using [specify the software, e.g., SPSS, R]. Descriptive statistics, Chi-square tests, and logistic regression were conducted with appropriate statistical procedures available within the software.

13. Ethical Considerations

Ethical principles were followed in the conduct of this investigation. All subjects gave their informed consent after receiving guarantees of confidentiality and anonymity during the study. To protect the integrity and privacy of the participants, the data was only utilized for study.

Chapter Four

4.1 Introduction

Data are shown in tables and figures in this chapter. Tools for explanatory data analysis are used, such as pie charts, bar plots, and frequency tables. in order for the respondent's opinions to be shown.

4.2 Frequency Distribution

4.2.1 Descriptive Table

Table 1 Descriptive Table

Characteristic	N = 100 ⁱ
Relevance of OBE curriculum to real world application.	
Preparing student for their future careers	63 (63.00)
Alignment with industry need	10 (10.00)
Skill gained	18 (18.00)
Others (Engineering Education, Healthcare Training, Vocational Training ,etc.)	9 (9.00)
Challenges that faced under the OBE curriculum.	
Adapting to new learning method	50 (50.00)
Managing workload	10 (10.00)
Understanding assessment criteria	10 (10.00)
All	30 (30.00)
The emphasis on learning objectives in the OBE curriculum.	
Well	36 (36.00)
Moderately	56 (56.00)
Poorly	8 (8.00)
Aspect of the OBE curriculum most beneficial for your learning experience.	
Clear learning objectives	47 (47.00)
Practical application	30 (30.00)
Engaging activities	13 (13.00)

Characteristic	N = 100^t
Others (Continuous Improvement, Simulations and Role-Playing, Case Studies, etc.)	10 (10.00)
Changes in study habits or approach to learning under the OBE curriculum.	82 (82.00)
Aspects of the OBE curriculum that challenging or in need of improvement.	
Clarity of learning objectives	26 (26.00)
Availability of resources/materials	48 (48.00)
Integration of practical experiences	10 (10.00)
Assessment methods	16 (16.00)
The OBE curriculum adequately prepare you for real world application?	93 (93.00)
Satisfaction with the variety of methods used in the OBE.	
Neutral	40 (40.00)
Satisfied	51 (51.00)
Dissatisfied	9 (9.00)
Enough flexibility within the OBE curriculum to accommodate diverse learning styles.	87 (87.00)
The instructors communicate the objectives and expectations of the OBE curriculum.	
Not well at all	16 (16.00)
Moderately well	77 (77.00)
Very well	7 (7.00)
Balance between theoretical knowledge and practical skills in the OBE curriculum.	
Too much emphasis on theory	80 (80.00)
Too much emphasis on practical skills	20 (20.00)
The resources provided (textbooks, online materials, etc.) to meet the learning objectives.	
Neutral	33 (33.00)
Adequate	50 (50.00)
Inadequate	17 (17.00)
The objective-based curriculum improved your critical thinking and problem-solving skills.	
Neutral	38 (38.00)
Improved	55 (55.00)
Not Improve	7 (7.00)
Recommendation for other students.	
Not-OBE	8 (8.00)
OBE	92 (92.00)

4.2.2 Composition of Respondents

The present investigation involves University of Barishal students to obtaining the overall views of the students about objective base education (OBE) curriculum and their opinion

Table 2 Relevance of OBE curriculum to real world application.

Relevance of OBE curriculum to real world application.				
	Frequency	Percent	Valid Percent	Cumulative Percent
OBE	63	63.0	63.0	63.0
2	10	10.0	10.0	73.0
3	18	18.0	18.0	91.0
4	9	9.0	9.0	100.0
Total	100	100.0	100.0	

Figure 2 : Relevance of OBE curriculum to real world application.

- The majority (63%) of respondents view the OBE curriculum as highly relevant.10% and 18% gave intermediate ratings ("2" and "3").
- 9% found the OBE curriculum the least relevant ("4").
- Overall, a significant portion of respondents sees relevance in the OBE curriculum (since "OBE" and intermediate responses dominate).

Table 3 Challenges that faced under the OBE curriculum.

Challenges that faced under the OBE curriculum.				
	Frequency	Percent	Valid Percent	Cumulative Percent
Adapting to new learning method	50	50.0	50.0	50.0
Managing workload	10	10.0	10.0	60.0
Understanding assessment criteria	10	10.0	10.0	70.0
All	30	30.0	30.0	100.0
Total	100	100.0	100.0	

Figure 3: Challenges that faced under the OBE curriculum.

The most frequently reported issue was **adapting to the new learning method**, affecting half of the respondents.

The challenges of **managing workload** and **understanding assessment criteria**, each cited by 10% of respondents, also indicate areas where students may benefit from clearer guidance on workload expectations and assessment standards.

Notably, 30% of students reported facing **all** challenges simultaneously, which could imply that a certain segment struggles with the overall demands of the OBE system.

Table 4 The emphasis on learning objectives in the OBE curriculum.

The emphasis on learning objectives in the OBE curriculum.				
	Frequency	Percent	Valid Percent	Cumulative Percent
Well	36	36.0	36.0	36.0
Moderately	56	56.0	56.0	92.0
Poorly	8	8.0	8.0	100.0
Total	100	100.0	100.0	

Figure 4 : The emphasis on learning objectives in the OBE curriculum.

- **Moderately** was the most common response, with 56% of students indicating that the emphasis on learning objectives was only moderately effective. This suggests room for improvement in making learning objectives more engaging or clearer within the curriculum.
- **Well** was chosen by 36% of students, reflecting a significant portion that feels the emphasis on learning objectives is effectively addressed.
- **Poorly** was selected by 8% of students, showing a small minority who feel that the learning objectives are not emphasized effectively.

Table 5 Aspect of the OBE curriculum most beneficial for your learning experience.

Aspect of the OBE curriculum most beneficial for your learning experience.				
	Frequency	Percent	Valid Percent	Cumulative Percent
Clear learning objectives	47	47.0	47.0	47.0
Practical application	30	30.0	30.0	77.0
Engaging activities	13	13.0	13.0	90.0

Others (Continuous Improvement, Simulations and Role-Playing, Case Studies, etc.)	10	10.0	10.0	100.0
Total	100	100.0	100.0	

Figure 5 : Aspect of the OBE curriculum most beneficial for your learning experience.

- **Clear learning objectives** emerged as the top benefit, with 47% of respondents appreciating the guidance and structure these objectives provide. This aligns with OBE's focus on outcomes, showing that clarity in goals enhances the learning experience for many students.
- **Practical application** was the second most valued aspect, with 30% of students finding it particularly beneficial. This response suggests that hands-on learning reinforces theoretical knowledge, making it more relatable and memorable.
- **Engaging activities** and **Others** (including continuous improvement, simulations, and case studies) were less commonly selected but still notable, with 13% and 10% respectively. These activities offer alternative ways of learning that engage different types of learners, adding diversity to the curriculum.

Table 6 Changes in study habits or approach to learning under the OBE curriculum.

Changes in study habits or approach to learning under the OBE curriculum.				
	Frequency	Percent	Valid Percent	Cumulative Percent
No	18	18.0	18.0	18.0
Yes	82	82.0	82.0	100.0
Total	100	100.0	100.0	

Figure 6 : Changes in study habits or approach to learning under the OBE curriculum.

- **82% of students** reported changes in their study habits or approaches under the OBE curriculum, indicating that most students felt compelled to adapt their learning strategies to align with the demands of this new framework.
- **18% of students** did not experience a change in their study habits, suggesting that a minority either maintained effective study strategies compatible with OBE or found no need to adjust.

Table 7 Aspects of the OBE curriculum that challenging or in need of improvement.

Aspects of the OBE curriculum that challenging or in need of improvement.				
	Frequency	Percent	Valid Percent	Cumulative Percent
Clarity of learning objectives	26	26.0	26.0	26.0
Availability of resources/materials	48	48.0	48.0	74.0
Integration of practical experiences	10	10.0	10.0	84.0
Assessment methods	16	16.0	16.0	100.0
Total	100	100.0	100.0	

Figure 7: Aspects of the OBE curriculum that challenging or in need of improvement.

- **Availability of resources/materials** was the most cited area needing improvement, with nearly half (48%) of students highlighting it as a challenge. This suggests a demand for better access to materials that support OBE objectives.
- **Clarity of learning objectives** was selected by 26% of students, indicating that some find the objectives ambiguous or difficult to interpret, which may hinder effective learning.
- **Assessment methods** (16%) and **integration of practical experiences** (10%) were less frequently highlighted but still represent areas where improvements could enhance the curriculum. These responses suggest a desire for assessments that better reflect learning outcomes and more opportunities for hands-on learning.

Table 8 The OBE curriculum adequately prepare you for real world application

The OBE curriculum adequately prepare you for real world application?				
	Frequency	Percent	Valid Percent	Cumulative Percent
No	7	7.0	7.0	7.0
Yes	93	93.0	93.0	100.0
Total	100	100.0	100.0	

Figure 8 : The OBE curriculum adequately prepare you for real world application

- **93% of students** believe the OBE curriculum adequately prepares them for real-world applications, suggesting that most students find the curriculum relevant and practical in relation to future career or life scenarios.
- **7% of students** feel that the curriculum does not adequately prepare them for real-world applications, indicating a small segment who may feel the curriculum lacks practical, hands-on learning or real-life relevance.

Table 9 Satisfaction with the variety of methods used in the OBE.

Satisfaction with the variety of methods used in the OBE.				
	Frequency	Percent	Valid Percent	Cumulative Percent
Neutral	40	40.0	40.0	40.0
Satisfied	51	51.0	51.0	91.0
Dissatisfied	9	9.0	9.0	100.0
Total	100	100.0	100.0	

Figure 9 : Satisfaction with the variety of methods used in the OBE.

- **51% of students** reported being satisfied with the variety of methods used in the OBE curriculum, indicating a positive reception to the teaching strategies employed.

- A substantial **40% of students** expressed a neutral stance, suggesting that while they did not find the methods particularly objectionable, they may also not be entirely enthusiastic about them.
- Only **9% of students** were dissatisfied, highlighting that the majority find the variety of methods acceptable or effective.

Table 10 Enough flexibility within the OBE curriculum to accommodate diverse learning styles.

Enough flexibility within the OBE curriculum to accommodate diverse learning styles.					
		Frequency	Percent	Valid Percent	Cumulative Percent
Valid	No	13	13.0	13.0	13.0
	Yes	87	87.0	87.0	100.0
	Total	100	100.0	100.0	

Figure 10 : Enough flexibility within the OBE curriculum to accommodate diverse learning styles.

- A significant **87% of students** believe that the OBE curriculum provides enough flexibility to accommodate diverse learning styles. This reflects a positive reception of the curriculum's design, suggesting that it effectively addresses the varied needs of learners.
- Only **13% of students** felt that there is not enough flexibility, indicating a small minority who may struggle to engage with the curriculum or feel that their learning preferences are not adequately supported.

Table 11 The instructors communicate the objectives and expectations of the OBE curriculum.

The instructors communicate the objectives and expectations of the OBE curriculum.				
	Frequency	Percent	Valid Percent	Cumulative Percent
Not well at all	16	16.0	16.0	16.0
Moderately well	77	77.0	77.0	93.0
Very well	7	7.0	7.0	100.0
Total	100	100.0	100.0	

Figure 11: The instructors communicate the objectives and expectations of the OBE curriculum.

- A substantial **77% of students** reported that instructors communicate the objectives and expectations **moderately well**. This indicates that while communication is generally acceptable, there may be room for improvement in clarity or engagement.
- **16% of students** felt that objectives and expectations are communicated **not well at all**, suggesting a significant minority who may struggle to understand the curriculum's goals, which could impact their learning experience.
- Only **7% of students** felt that instructors communicate these aspects **very well**, indicating that this level of effectiveness is achieved by a small fraction of educators.

Table 12 Impact of the objective-based curriculum on your overall learning experience.

Impact of the objective-based curriculum on your overall learning experience.				
	Frequency	Percent	Valid Percent	Cumulative Percent
Neutral	43	43.0	43.0	43.0

Total	100	100.0	100.0	

Figure 12 : Impact of the objective-based curriculum on your overall learning experience.

- **50% of students** reported that the OBE curriculum has a **positive impact** on their overall learning experience. This suggests that many students find the curriculum beneficial and aligned with their learning goals.
- A significant **43% of students** felt **neutral** about the impact, indicating that while they do not perceive negative effects, they may not feel strongly positive about their experiences either. This group may benefit from enhancements in engagement or support.
- Only **7% of students** experienced a **negative impact**, highlighting a small segment who may struggle with the OBE framework. Addressing their concerns could be crucial for improving their learning outcomes.

Table 13 Balance between theoretical knowledge and practical skills in the OBE curriculum.

Balance between theoretical knowledge and practical skills in the OBE curriculum.				
	Frequency	Percent	Valid Percent	Cumulative Percent
Too much emphasis on theory	36	36.0	36.0	36.0
Too much emphasis on practical skills	20	20.0	20.0	56.0
Balanced	44	44.0	44.0	100.0
Total	100	100.0	100.0	

Figure 13 : The resources provided (textbooks, online materials, etc.) to meet the learning objectives.

Comment : The chart shows three categories of responses:

- Approximately 36% of respondents neither agreed nor disagreed that the curriculum is too much emphasis on theory.
- Around 20% of respondents neither agreed nor disagreed that the curriculum is too much emphasis on practical skills.
- A large portion, 44% indicated that the curriculum system is balanced on theory and practical skill.

Table 14 The resources provided (textbooks, online materials, etc.) to meet the learning objectives.

The resources provided (textbooks, online materials, etc.) to meet the learning objectives.				
	Frequency	Percent	Valid Percent	Cumulative Percent
Neutral	33	33.0	33.0	33.0

Total	100	100.0	100.0	

Figure 14 : The resources provided (textbooks, online materials, etc.) to meet the learning objectives.

Comment : This bar chart displays responses to the statement: "The resources provided (textbooks, online materials, etc.) meet the learning objectives." The responses are categorized as follows:

- **Neutral:** Around 33% of respondents feel indifferent about the adequacy of the resources.
- **Adequate:** Approximately 50% agree that the resources provided are adequate to meet the learning objectives.
- **Inadequate:** About 17% believe that the resources are inadequate for meeting learning objectives.

Table 15 The objective-based curriculum improved your critical thinking and problem-solving skills.

The objective-based curriculum improved your critical thinking and problem-solving skills.				
	Frequency	Percent	Valid Percent	Cumulative Percent
Neutral	38	38.0	38.0	38.0
Improved	55	55.0	55.0	93.0
Not Improve	7	7.0	7.0	100.0
Total	100	100.0	100.0	

Figure 15: The objective-based curriculum improved your critical thinking and problem-solving skills.

Comment : The chart shows three categories of responses:

- **Neutral:** Approximately 38% of respondents neither agreed nor disagreed that the curriculum improved their skills.
- **Improved:** Around 55% agreed that the curriculum positively impacted their critical thinking and problem-solving skills.
- **Not Improve:** A small portion, below 7%, indicated that the curriculum did not improve these skills.

Table 16 Recommendation for other students.

Recommendation for other students.				
	Frequency	Percent	Valid Percent	Cumulative Percent
Not-OBE	8	8.0	8.0	8.0
OBE	92	92.0	92.0	100.0
Total	100	100.0	100.0	

Figure 16: : Recommendation for other students.

Comment : This bar chart visualizes recommendations for other students, showing the proportion that suggests following an OBE (Outcome-Based Education) approach versus a Not-OBE approach. According to the chart, 92% of respondents recommend the OBE approach, while 8% recommend Not-OBE.

4.4 Chi-Square Tests

4.4.1 Chi Square Crosstab

Table 18 Recommendation for other students. * Enough flexibility within the OBE curriculum to accommodate diverse learning styles.

		Enough flexibility within the OBE curriculum to accommodate diverse learning styles.		Total
		No	Yes	
Recommendation for other students.	Not-OBE	7	1	8
	OBE	6	86	92
Total		13	87	100

The majority of respondents (87%) perceive the OBE curriculum as flexible, indicating that it effectively accommodates diverse learning styles. This perception of flexibility strongly influences recommendations, as 98.9% of those who view the curriculum as flexible recommend OBE to other students. Even among those who perceive the curriculum as not flexible, 46.2% still recommend OBE, highlighting its appeal despite some reservations. Overall, 92% of respondents recommend the OBE curriculum, demonstrating broad support and underscoring its perceived strengths in flexibility and applicability.

Table 19 Recommendation for other students. * The resources provided (textbooks, online materials, etc.) to meet the learning objectives.

Crosstab					
		The resources provided (textbooks, online materials, etc.) to meet the learning objectives.			Total
		Neutral	Adequate	Inadequate	
Recommendation for other students.	Not-OBE	0	0	8	8
	OBE	33	50	9	92
Total		33	50	17	100

The crosstab analysis shows the relationship between students' recommendations for the OBE curriculum and their perceptions of the adequacy of the resources provided. Among the students who found the resources inadequate, the majority (8 out of 17) did not recommend the OBE curriculum, highlighting a significant correlation between resource adequacy and student satisfaction. Conversely, students who found the resources adequate (50 out of 50) or were neutral about their adequacy (33 out of 33) overwhelmingly recommended the OBE curriculum (92 out of 100).

Table 20 Recommendation for other students. * Relevance of OBE curriculum to real world application.

		Relevance of OBE curriculum to real world application.				Total
		Preparing student for their future careers	Alignment with industry need	Skill gained	Others (Engineering Education, Healthcare Training, Vocational Training ,etc.)	
Recommendation for other students.	Not-OBE	1	0	5	2	8
	OBE	62	10	13	7	92
Total		63	10	18	9	100

The survey results highlight the relevance of the Outcomes-Based Education (OBE) curriculum to real-world applications, analyzed across various aspects such as career preparation, industry alignment, skill acquisition, and specialized training. Among the 100 respondents, 63 emphasized that OBE prepares students for their future careers, with a remarkable 62 out of these recommending OBE to others. Similarly, alignment with industry needs was identified by 10 respondents, all of whom recommended OBE. Skill acquisition was noted by 18 respondents, of which 13 endorsed OBE, while 5 recommended non-OBE programs. In specialized areas such as engineering education, healthcare training, and vocational training, 9 respondents highlighted relevance, with 7 supporting OBE and 2 preferring non-OBE. Overall, 92% of respondents recommend OBE, demonstrating its strong alignment with practical and industry-focused outcomes.

Table 21 Recommendation for other students. * Challenges that faced under the OBE curriculum.

		Challenges that faced under the OBE curriculum				Total
		Adapting to new learning method	Managing workload	Understanding assessment criteria	All	
Recommendation for other students.	Not-OBE	0	0	1	7	8
	OBE	50	10	9	23	92
Total		50	10	10	30	100

The challenges faced under the Outcomes-Based Education (OBE) curriculum primarily include adapting to new learning methods, managing workload, understanding assessment criteria, and dealing with all these factors collectively. Among the 100 respondents, 50 identified adapting to new learning methods as a challenge, all of whom still recommended OBE to others. Managing workload was noted by 10 respondents, with all of them endorsing

OBE. Understanding assessment criteria was a concern for 10 respondents, with 9 recommending OBE and 1 recommending non-OBE. The most significant challenge was addressing all these issues collectively, as reported by 30 respondents; however, 23 of them still supported OBE, while 7 recommended non-OBE. Despite these challenges, a substantial 92% of respondents recommend OBE, reflecting its perceived benefits outweighing the difficulties faced.

Table 22 Recommendation for other students. * The emphasis on learning objectives in the OBE curriculum.

		The emphasis on learning objectives in the OBE curriculum.			Total
		Well	Moderately	Poorly	
Recommendation for other students.	Not-OBE	0	1	7	8
	OBE	36	55	1	92
Total		36	56	8	100

The emphasis on learning objectives in the OBE curriculum was rated as "Well," "Moderately," or "Poorly" by the respondents. Among the 100 participants, 36 felt that the curriculum emphasizes learning objectives well, all of whom recommended OBE. A majority of 56 respondents rated the emphasis as moderate, with 55 supporting OBE and 1 recommending non-OBE. Only 8 respondents rated the emphasis as poor, with 7 recommending non-OBE and 1 supporting OBE. Despite varying opinions on the degree of emphasis, 92% of respondents ultimately recommend OBE, highlighting its overall effectiveness in addressing learning objectives.

Table 23 Recommendation for other students. * Aspect of the OBE curriculum most beneficial for your learning experience.

		Aspect of the OBE curriculum most beneficial for your learning experience.				Total
		Clear learning objectives	Practical application	Engaging activities	Others (Continuous Improvement, Simulations and Role-Playing, Case Studies, etc.)	
Recommendation for other students.	Not-OBE	2	3	2	1	8
	OBE	45	27	11	9	92
Total		47	30	13	10	100

The most beneficial aspects of the OBE curriculum for learning experiences, as identified by respondents, include clear learning objectives, practical application, engaging activities, and other methods such as continuous improvement, simulations, role-playing, and case studies. Among the 100 respondents, 47 highlighted clear learning objectives, with 45 recommending OBE and 2 recommending non-OBE. Practical application was chosen by 30 respondents, with 27 endorsing OBE and 3 preferring non-OBE. Engaging activities were beneficial for 13 respondents, with 11 recommending OBE and 2 non-OBE. Lastly, 10 respondents identified other innovative methods, with 9 supporting OBE and 1 suggesting non-OBE. Overall, 92% of respondents recommend OBE, indicating its strong impact across diverse aspects of the learning experience.

Table 24 Recommendation for other students. * The OBE curriculum adequately prepare you for real world application

		The OBE curriculum adequately prepare you for real world application		Total
		No	Yes	
Recommendation for other students.	Not-OBE	5	3	8
	OBE	2	90	92
Total		7	93	100

The survey results indicate that the OBE curriculum is widely regarded as preparing students for real-world applications. Out of 100 respondents, 93 agreed that the curriculum adequately prepares them, with 90 of these recommending OBE to others and 3 recommending non-OBE. Conversely, 7 respondents felt the curriculum does not provide adequate preparation, with 5 recommending non-OBE and 2 still endorsing OBE. Overall, 92% of participants recommend OBE, highlighting strong confidence in its ability to equip students for practical, real-world challenges.

Table 25 Recommendation for other students. * Satisfaction with the variety of methods used in the OBE.

		Satisfaction with the variety of methods used in the OBE.			Total
		Neutral	Satisfied	Dissatisfied	
Recommendation for other students.	Not-OBE	1	0	7	8
	OBE	39	51	2	92
Total		40	51	9	100

The survey results show varying levels of satisfaction with the variety of methods used in the OBE curriculum. Among the 100 respondents, 51 expressed satisfaction, with 50 recommending OBE and 1 recommending non-OBE. Another 40 respondents were neutral, of which 39 endorsed OBE and 1 non-OBE. Only 9 respondents were dissatisfied, with 7

recommending non-OBE and 2 still supporting OBE. Despite some dissatisfaction, a strong 92% of participants recommend OBE, emphasizing overall satisfaction with the curriculum's diverse methods.

*Table 26 Recommendation for other students. * Impact of the objective-based curriculum on your overall learning experience.*

		Impact of the objective-based curriculum on your overall learning experience.			Total
		Neutral	Positively	Negatively	
Recommendation for other students.	Not-OBE	1	0	7	8
	OBE	42	50	0	92
Total		43	50	7	100

The survey results reveal the impact of the objective-based curriculum on respondents' overall learning experiences. Of the 100 participants, 50 reported a positive impact, all of whom recommended OBE to others. Another 43 respondents were neutral, with 42 endorsing OBE and 1 recommending non-OBE. Seven respondents felt the curriculum had a negative impact, and all of them recommended non-OBE. Despite these differing perceptions, a notable 92% of respondents recommend OBE, underscoring its overall positive influence on the learning experience.

4.4.2 Chi-Square value

*Table 27 Chi-Square value for Recommendation for other students. * Aspect of the OBE curriculum most beneficial for your learning experience.*

Chi-Square Tests						
	Value	df	Asymptotic Significance (2-sided)	Exact Sig. (2-sided)	Exact Sig. (1-sided)	Point Probability
Pearson Chi-Square	2.076	3	.557	.611		
Likelihood Ratio	2.043	3	.563	.743		
Fisher-Freeman-Halton Exact Test	2.791			.340		
Linear-by-Linear Association	1.336	1	.248	.268	.167	.071
N of Valid Cases	100					

There is no discernible trend or correlation between the variables examined, according to the chi-square test results. The Likelihood Ratio test generated a value of 2.043 with a p-value of 0.563 and the Pearson Chi-Square test produced a value of 2.076 with a p-value of 0.557, both

of which were over the 0.05 significance level. The lack of a significant association was further supported by the Fisher-Freeman-Halton Exact Test, which revealed an exact significance of 0.340. When evaluating for a linear trend, the Linear-by-Linear Association test yielded a score of 1.336 with p-values of 0.167 (exact) and 0.248 (asymptotic), both of which were over the cutoff. One hundred legitimate instances were analyzed, and all of the findings clearly point to the absence of any trend or statistically significant correlation between the variables at the 0.05 level.

*Table 28 Chi-Square value for Recommendation for other students. * The instructors communicate the objectives and expectations of the OBE curriculum.*

Chi-Square Tests						
	Value	df	Asymptotic Significance (2- sided)	Exact Sig. (2- sided)	Exact Sig. (1- sided)	Point Probability
Pearson Chi-Square	3.358	2	.187	.205		
Likelihood Ratio	3.300	2	.192	.254		
Fisher-Freeman-Halton Exact Test	2.730			.205		
Linear-by-Linear Association	3.151	1	.076	.115	.080	.065
N of Valid Cases	100					

There is no discernible trend or correlation between the variables under analysis, according to the chi-square test results. Both the Likelihood Ratio test and the Pearson Chi-Square test produced results above the 0.05 significance threshold, with a p-value of 0.192 and a value of 3.300, respectively, and a p-value of 0.187 and 3.358. The lack of a significant association was further supported by the Fisher-Freeman-Halton Exact Test, which yielded an exact significance of 0.205. With p-values of 0.076 (asymptotic) and 0.115 (exact), the Linear-by-Linear Association test, which looks for a linear trend, yielded a value of 3.151 that is not statistically significant at the 0.05 level. The research, which was carried out on 100 valid cases, consistently indicates that there is no linear trend or significant connection between the variables.

*Table 29 Chi-Square value for Recommendation for other students. * Balance between theoretical knowledge and practical skills in the OBE curriculum.*

Chi-Square Tests

	Value	df	Asymptotic Significance (2-sided)	Exact Sig. (2- sided)	Exact Sig. (1- sided)	Point Probability

Likelihood Ratio	12.608	2	.002	.002		
Fisher-Freeman-Halton Exact Test	10.639			.001		
Linear-by-Linear Association	2.246	1	.134	.153	.100	.055
N of Valid Cases	100					

The results of the chi-square test show that the variables are significantly correlated. The results of the Likelihood Ratio test were 12.608 with a p-value of 0.002 and the Pearson Chi-Square test returned a value of 11.685 with a p-value of 0.003, both of which were below the 0.05 significance level. A significant result with an exact significance of 0.001 was also revealed by the Fisher-Freeman-Halton Exact Test. However, there was no significant linear trend, as indicated by the Linear-by-Linear Association test, which assesses a linear trend. The test yielded a value of 2.246 with asymptotic and exact p-values of 0.134 and 0.153, respectively. Although there is no indication of a linear trend, the research, which is based on 100 valid examples, indicates a statistically significant correlation between the variables.

A statistically significant relationship for recommendations of OBE and Balance between theoretical knowledge and practical skills in the OBE curriculum., as evidenced by the Pearson Chi-Square, Likelihood Ratio, and Fisher-Freeman-Halton Exact Test results.

4.5 Bootstrap for Parameter Estimates

Table 30 Bootstrap Table

Variable	Coefficient (B)	Bias	Std. Error	Sig. (2-tailed)	Lower CI	Upper CI
Intercept	-37.870	9.444	26.602	0.128	-74.272	19.670
Relevance of OBE curriculum to real world application	-1.222	0.835	1.648	0.514	-3.667	3.043
Challenges faced under the OBE curriculum	1.319	- 0.061	1.246	0.153	-0.715	4.395
The emphasis on learning objectives in the OBE curriculum	15.813	- 6.202	5.812	0.030	0.410	21.345
Aspect of the OBE curriculum most beneficial for your learning experience	-3.492	3.040	2.909	0.492	-5.979	5.505
Changes in study habits or approach to learning under the OBE curriculum	-2.854	0.882	4.026	0.431	-10.519	5.328

Aspects of the OBE curriculum that are challenging or in need of improvement	3.592	- 2.488	1.801	0.335	-2.124	5.037
The OBE curriculum adequately prepares you for real world application	-25.267	4.135	19.955		-42.731	0.478
Satisfaction with the variety of methods used in the OBE	-0.497	- 0.175	4.085	0.873	-7.795	8.394
Enough flexibility within the OBE curriculum to accommodate diverse learning styles	-25.461	9.071	8.885	0.045	-31.321	0.389
The instructors communicate the objectives and expectations of the OBE curriculum	6.773	- 3.231	4.037	0.083	-3.716	13.092
Impact of the objective-based curriculum on your overall learning experience	11.948	- 1.266	6.300	0.104	0.000	23.865
Balance between theoretical knowledge and practical skills in the OBE curriculum	0.141	- 0.730	1.863	0.907	-5.111	2.625
The objective-based curriculum improved your critical thinking and problem-solving skills	5.685	- 1.056	7.503	0.379	-6.479	22.839
The resources provided (textbooks, online materials, etc.) to meet the learning objectives	2.408	0.074	3.499	0.332	-3.660	11.073

The bootstrap estimation results reveal key insights into the impact of various aspects of the OBE curriculum. The most significant finding is the positive influence of **emphasizing learning objectives**, with a coefficient of 15.813 ($p = 0.030$), indicating that a clear focus on objectives enhances learning outcomes. Conversely, the perception of **sufficient flexibility** within the curriculum has a significant negative impact (coefficient = -25.461, $p = 0.045$), suggesting that too much flexibility may reduce the effectiveness of the OBE structure. Although **instructors' communication** of objectives and **overall impact on learning** show positive trends. Other factors, including **real-world application**, **critical thinking skills**, and **variety of methods**, were found to have non-significant effects, with coefficients that were not stable across resamples. These results highlight that while some elements, like clear objectives and manageable flexibility, are crucial, others may require further refinement or investigation.

4.6 Variance Inflation Factor (VIF) Analysis

The Variance Inflation Factor (VIF) values indicate the extent of multicollinearity among predictors in the model. Higher VIF values suggest redundancy or overlap between variables, which can distort coefficient estimates and reduce model reliability. Below is the interpretation of the provided VIF values.

Table 31 VIF Value

Variable	VIF Value	Interpretation
Relevance of OBE curriculum to real-world application	5.92	Moderate multicollinearity. While acceptable, this variable may have some redundancy with others.
Challenges faced under the OBE curriculum	10.65	High multicollinearity. This variable likely shares significant overlap with other predictors, which could distort estimates.
Emphasis on learning objectives in the OBE curriculum	4.93	Moderate multicollinearity. Considered tolerable but may still affect model performance slightly.
Aspect of the OBE curriculum most beneficial for your learning experience	19.38	Very high multicollinearity. Indicates severe redundancy with other variables. Strongly consider addressing this.
Changes in study habits or approach to learning under the OBE curriculum	3.77	Low multicollinearity. No major concern here.
Aspects of the OBE curriculum that are challenging or in need of improvement	9.06	High multicollinearity. Significant overlap with other predictors; consider revision.
The OBE curriculum adequately prepares you for real-world application	11.11	High multicollinearity. Affects reliability of coefficient estimates.
Satisfaction with the variety of methods used in the OBE	8.55	Moderate to high multicollinearity. Further investigation recommended.
Flexibility within the OBE curriculum	14.77	Very high multicollinearity. Likely redundant or highly correlated with other variables.
Instructor communication of objectives and expectations	4.87	Moderate multicollinearity. Acceptable but should be monitored.
Impact of the objective-based curriculum on learning experience	16.61	Very high multicollinearity. Strongly consider addressing overlap with other variables.
Balance between theory and practice	7.26	Moderate to high multicollinearity. Could affect model interpretation.
Adequacy of resources provided	6.57	Moderate multicollinearity. Generally tolerable but might require review.
Improvement in critical thinking and problem-solving skills	15.36	Very high multicollinearity. Consider removing or combining related predictors.

4.7 Logistic regression

Table 32 Logistics Regression Result Table

Variable	Coefficient Estimate	Std. Error	Z-value	P-value
(Intercept)	7.736215	24.6141	1.67664	0.09361
Relevance of OBE curriculum to real-world application.	-1.004715	0.58114	-1.72887	0.08383
Changes in study habits or approach to learning under the OBE curriculum.	1.991800	1.351003	1.47431	0.14040
Aspects of the OBE curriculum that are challenging or in need of improvement.	-0.496059	0.685385	-0.72377	0.46921
Satisfaction with the variety of methods used in the OBE.	-3.177891	1.274124	-2.49418	0.01262
Instructors communicate the objectives and expectations of the OBE curriculum.	-0.330156	1.539673	-0.21443	0.83021
Balance between theoretical knowledge and practical skills in the OBE curriculum.	0.615627	0.827479	0.74398	0.45689

4.7.1 Logistic Regression Results:

The main conclusions drawn from the logistic regression study. One noteworthy finding was the inverse link between the probability of a successful outcome and satisfaction with the range of approaches included in the OBE program. This implies that while a wider range of instructional strategies may be advantageous, they might not always enhance students' learning experiences. Furthermore, there was a marginally significant negative correlation between OBE's connection to real-world applications and students' perceptions of the curriculum's efficacy, suggesting that although students may recognize the relevance to the real world, it does not significantly affect their assessment. While learning adaptations are crucial, they don't directly affect the outcomes in this case, as seen by the fact that the results were not statistically significant even though the changes in study habits or attitude to learning were favorably associated with the outcome. The poor relationship between positive outcomes and real-world applicability, looking into the possibility that students may believe the curriculum is not practically applicable even though it is meant to be used in real-world situations. Additionally, note that although adjustments to study habits may benefit individual learning, they don't appear to have a direct impact on the OBE curriculum's overall results. The non-significant impacts of instructor communication and theory-practice balance, implying that these elements may not have as much of an impact.

Summarize the main conclusions of this analysis in the conclusion, highlighting the outcome's most important predictors as well as those that had no discernible impact. Provide helpful advice for teachers and curriculum designers, such as emphasizing the need to make teaching strategies more coherent and clearer and to better match the curriculum to students' expectations in the actual world. Lastly, make recommendations for future study directions, such as a more thorough examination of curriculum design, teaching strategies, and the potential performance of various topic areas within the OBE framework.

4.8 Odds Ratio

Table 33 Odds Ratio Table

Characteristic	N	Unadjusted			Adjusted		
		OR (95% CI)	95% CI	p-value	OR (95% CI)	95% CI	p-value
RRWA	100	0.34 (0.15, 0.65)	0.15, 0.65	0.003	0.37 (0.09, 1.05)	0.09, 1.05	0.084
CSH	100	20.0 (4.09, 148)	4.09, 148	<0.001	7.33 (0.48, 144)	0.48, 144	0.140
ACNI	100	0.70 (0.35, 1.44)	0.35, 1.44	0.316	0.61 (0.13, 2.42)	0.13, 2.42	0.469
satisfaction	100	0.02 (0.00, 0.11)	0.00, 0.11	<0.001	0.04 (0.00, 0.34)	0.00, 0.34	0.013
BTKPA	100	1.91 (0.83, 5.14)	0.83, 5.14	0.148	1.85 (0.37, 12.4)	0.37, 12.4	0.457
ICOE	100	3.69 (0.85, 16.1)	0.85, 16.1	0.078	0.72 (0.02, 14.6)	0.02, 14.6	0.830

Important Factors: The most notable finding is that there was a negative correlation ($p = 0.01262$) between the positive outcome and satisfaction with the variety of methods used in the OBE curriculum. This suggests that better results may not always follow from higher satisfaction with teaching methods.

Marginally Significant Factors: A small negative correlation is shown between OBE's relevance to real-world applications ($p = 0.08383$), and a potential but non-significant effect on the result is suggested by changes in study habits or learning style ($p = 0.14040$).

Non-Significant Factors: A number of other variables, such as the curriculum's difficult components, the communication style of the instructors, and the ratio of theory to practical skills, were not statistically significant, which means they had no discernible or powerful effect on the results in this particular situation.

In conclusion, while some OBE curriculum components—such as teacher communication and curriculum challenges—had a substantial impact on the results, others—such as satisfaction with teaching methods and their connection to the actual world—did not. The results imply that whereas some elements of OBE might enhance learning outcomes, others would require revision or refined.

4.9 Confusion matrix:

Table 34 Confusion matrix Table

Actual \ Predicted	Predicted	
	Not-OBE	OBE
Not-OBE	6	0
OBE	2	92

True Positives (TP): 92 (Predicted 1 and actually 1).

True Negatives (TN): 6 (Predicted 0 and actually 0).

False Positives (FP): 2 (Predicted 1 but actually 0).

False Negatives (FN): 0 (Predicted 0 but actually 1).

With an accuracy of 98%—that is, accurately predicting the outcome in 98 out of 100 cases—the confusion matrix shows that the model has performed remarkably well overall. The model showed great precision (97.87%) for class 1 (the positive class), which means that almost all of its positive predictions came true. Furthermore, for class 1, the model obtained perfect recall (100%) meaning that it correctly identified every real positive example without missing any. This is further corroborated by a robust F1-Score of 98.93%, which confirms the model's dependability in class 1 outcome prediction by striking a compromise between precision and recall.

4.10 Key Findings

Several important conclusions are drawn from the examination of Barishal University's OBE curriculum. The majority of students (63%) believe that the curriculum is very applicable to the actual world and strongly aligned with career preparation. Challenges were apparent, nevertheless, since the most commonly mentioned problem was adjusting to new learning techniques (50%), which was followed by managing workload and comprehending

evaluation criteria (10% each). Interestingly, 30% of students said they had dealt with all of these issues at once. There is potential for improvement in this area, as 56% of respondents thought the emphasis on learning objectives was moderate, 36% thought it was handled well, and 8% thought it was poor.

Students' enjoyment of specific learning objectives (47%) and real-world applications (30%) demonstrated the benefits of the curriculum, while engaging activities and other creative approaches received less but still noteworthy recognition.

The majority of students (82%) stated that their study habits had changed, suggesting that the curriculum had prompted them to modify their methods of learning. Furthermore, although 17% thought the materials offered were insufficient and 33% were neutral, 93% of students said the curriculum sufficiently prepared them for real-world applications. 51% of respondents expressed satisfaction with the range of teaching approaches, 40% expressed neutrality, and 9% expressed dissatisfaction. Additionally, 36% of students said the program placed too much emphasis on theory, whilst 44% thought there was a balance between theoretical and practical understanding.

A substantial negative association between the likelihood of positive learning outcomes and satisfaction with the variety of methods was shown by the logistic regression analysis, indicating that success may not always be guaranteed by a variety of approaches alone. Although positive connections between adaptation to study habits and applicability to real-world applications were found, they were not statistically significant, indicating areas that need more alignment with student expectations. Although they still have room for improvement, instructor communication and theory-practice balance likewise had little impact on overall results. Last but not least, the confusion matrix showed excellent predictive accuracy in identifying students who suggested the OBE curriculum. Its tiny dataset for non-recommenders limited information on their discontent.

These results highlight the OBE curriculum's advantages as well as its shortcomings, indicating that although it is widely accepted and seen as relevant, specific improvements could increase its efficacy and student happiness.

4.11 Recommendation

To improve the OBE curriculum's efficacy and tackle the issues noted, a number of specific suggestions are put forth. First, as 17% of students felt that the resources they currently had were insufficient, it is imperative that resources, including textbooks and online materials, be made more accessible and clear. The ambiguity that 26% of students experience should also be addressed by creating learning objectives that are clearer and easier to implement. Students will adjust more successfully if clearer rules and support systems are introduced to better manage obstacles like workload and evaluation requirements. The practical relevance of the curriculum can be further strengthened and worries about an excessive emphasis on theoretical knowledge can be addressed by increasing chances for hands-on learning, such as internships, simulations, and project-based tasks.

To improve communication skills and guarantee that goals and expectations are communicated in a clear and consistent manner, instructor training programs are advised. Diverse learning styles can be accommodated and student engagement raised by using more dynamic and engaging teaching techniques, like role-playing and case studies. Assessments and feedback systems should be carefully matched with real-world applications while preserving a balance between theoretical and practical knowledge. In order to assist students

in adapting their study habits and learning methodologies to the OBE framework, workshops or mentoring programs can also be implemented.

Lastly, to continuously improve the curriculum, frequent feedback loops including students, teachers, and industry stakeholders should be set up. A more comprehensive picture of the areas that require attention will be obtained by broadening the scope of data collection to include other perspectives from students who do not advocate the OBE paradigm. By tackling these elements, the OBE curriculum may better meet the requirements and expectations of students, guaranteeing its long-term viability and applicability in equipping graduates to face obstacles in the real world.

4.11 Limitations of the Project

While the findings of the project provide valuable insights into the perceptions and challenges of the OBE curriculum at Barishal University, certain limitations should be acknowledged to contextualize the results:

1. Sample Size and Representation:

- The study's 100 student replies might not accurately reflect the range of viewpoints held by all Barishal University students, particularly those from various academic levels and departments.

2. Self-Reported Data:

- Because the study uses self-reported data, it may be biased by social desirability bias, in which students give answers they believe to be anticipated rather than ones that reflect their true feelings.

3. Limited Focus on Faculty Perspectives:

- The analysis mostly focuses on the opinions of students; instructors' opinions and experiences applying the OBE curriculum are left out, which could result in the loss of important information on the difficulties in curriculum design and delivery.

4. Context-Specific Findings:

- The findings are unique to Barishal University and might not apply to other establishments with dissimilar student populations, academic systems, or resource

5. Resource Adequacy Assessment:

- Although the study draws attention to problems with resource adequacy, it doesn't go into detail on the precise kinds of resources that are inadequate or look into specific fixes outside of broad suggestions.

6. Lack of Longitudinal Data:

- Data is collected at a single point in time using a cross-sectional approach. This makes it more difficult to evaluate how the OBE curriculum has changed over time or its long-term effects.

7. **Unexplored Factors Influencing Perceptions:**

- Other factors including past academic experiences, extracurricular activities, and access to outside resources that can affect students' perspectives are not taken into consideration in this analysis.

Appendix

Questionnaire

Obtaining the overall views of the students about objective base education (OBE) curriculum and their opinion on in-course assessment system.

Name: Satsato Roy Jagannath

Roll: 20STA011

Phone no: 01400933133

Email: satsatoroyjagannath@gmail.com

Section-A: Socio-economic and demographic Information.

1. Phone Number _____
2. Email _____
3. Sex
☐ Male
☐ Female

Section B: Institutional factors like faculty, year, GPA/CGPA etc.

4. Current academic level?
☐ Undergraduates
☐ Master's

5. Last year CGPA?

Section C: Views on Objective-Based Education

6. Familiarity with the principles of OBE.
- ☐ Very familiar
 - ☐ Somewhat familiar
 - ☐ Not familiar at all
7. Relevance of OBE curriculum to real world application.
- ☐ Preparing student for their future careers
 - ☐ Alignment with industry need
 - ☐ Skill gained
 - ☐ Others (Engineering Education, Healthcare Training, Vocational Training, etc.)
8. Challenges that faced under the OBE curriculum.
- ☐ Adapting to new learning method
 - ☐ Managing workload
 - ☐ Understanding assessment criteria
 - ☐ All
9. The emphasis on learning objectives in the OBE curriculum.
- ☐ Well
 - ☐ Moderately
 - ☐ Poorly
10. Aspect of the OBE curriculum most beneficial for your learning experience.
- ☐ Clear learning objectives
 - ☐ Practical application
 - ☐ Engaging activities
 - ☐ Others (Continuous Improvement, Simulations and Role-Playing, Case Studies, etc.)
11. Changes in study habits or approach to learning under the OBE curriculum.
- ☐ Yes
 - ☐ No
12. Aspects of the OBE curriculum that challenging or in need of improvement.
- ☐ Availability of resources/materials
 - ☐ Integration of practical experiences
 - ☐ Assessment methods
13. The OBE curriculum adequately prepare you for real world application?
- ☐ Yes
 - ☐ No
14. Satisfaction with the variety of methods used in the OBE.

- ☐ Satisfied
- ☐ Neutral
- ☐ Dissatisfied

15. Enough flexibility within the OBE curriculum to accommodate diverse learning styles.
- ☐ Yes
 - ☐ No
16. The instructors communicate the objectives and expectations of the OBE curriculum.
- ☐ Not well at all
 - ☐ Moderately well
 - ☐ Very well
17. Impact of the objective-based curriculum on your overall learning experience.
- ☐ Positively
 - ☐ Neutral
 - ☐ Negatively
18. Balance between theoretical knowledge and practical skills in the OBE curriculum.
- ☐ Too much emphasis on theory
 - ☐ Too much emphasis on practical skills
 - ☐ Balanced
19. The resources provided (textbooks, online materials, etc.) to meet the learning objectives.
- ☐ Adequate
 - ☐ Neutral
 - ☐ Inadequate
20. The objective-based curriculum improved your critical thinking and problem-solving skills.
- ☐ Improved
 - ☐ Neutral
 - ☐ Not Improve
21. Recommendation for other students.
- ☐ OBE
 - ☐ Not-OBE
